	COP	Policy for prevention of adverse events in OT
	Version: 2.0	Page: Page 1 of 2
Creation Date 01/01/2017 Release Date 11/01/2017	**Created by Project Manager** Signature/Name: Ms Monica Ganvir	**Reviewed and Approved by Director** Signature/Name: Dr. B K Murali

1. Aim:

To establish guidelines to prevent adverse events like wrong site, wrong patients and wrong surgery.

2. Rationale; To prevent adverse events in OT like wrong site, wrong surgery, wrong patient etc.

3. Personnel Responsible:-

- Ward nurse
- OT nurse
- Surgeon
- Anesthetist

4. Procedure;

- It consists of a surgical safety checklist, identification, Records, confirmation at the various levels.

Surgical safety checklist:

- It has to be followed by the nurse, anesthetist and surgeon at various levels.
- The document should be signed and kept in the patient's file verifying the name and the registration no. of the patient.
- The document should be secured and given in the handover of the nurses.

Identification:

©Hope Hospital

- On admission nurses should put an identification band on the hand specifying patient's name, registration No, consultant name and diagnosis.

- The identification band should be water proof, should be locked, and the patient should be instructed to not to remove the band by his own.

- The patient should be provided a uniform allotted for that particular category of the ward.
- When patient is transferred from one ward to other, The uniform, the identification band should be changed.

5. Records:

- All the Details should be recorded properly and a signature has to be taken after the registration is done.

- All the consents during the hospitalization should be taken.

6. Confirmation before and after OT:

- The site has to be marked by the nurse before OT.
  (with at least nurse and anesthetist)

- Confirm the patient's name, procedure, and where the incision will be made.
  (with nurse, anesthetist and surgeon)

- The name of the procedure, Completion of instrument, sponge and needle Counts,
- Specimen labeling (read specimen labels aloud, including patient name)
  (verbal confirmation with nurse, anesthetist and surgeon)
