		Guidelines on Medication Recall
Creation Date 01/01/2017	Version: 1.0	
Released Date 11/01/2017	**Created by Quality Coordinator** Signature/Name: Dr. Darpan Jakkal,	**Guidance and Approved by Director** Signature/Name: Dr. B K Murali

1. Purpose

To establish a standardized procedure for the timely identification, communication, and removal of recalled medications to ensure patient safety and regulatory compliance.

2. Scope

These guidelines apply to all pharmacy, procurement, and clinical staff involved in medication management within the healthcare facility.

3. Definition

Medication Recall: A process initiated by manufacturers, regulatory authorities, or healthcare facilities to remove a medication from the supply chain due to safety, efficacy, quality, or labeling concerns.

4. Types of Medication Recall

- **Class I:** Serious health risks or death possible. Immediate action required.
- **Class II:** Temporary or reversible adverse effects. Prompt action required.
- **Class III:** Unlikely to cause adverse effects but violate labeling or manufacturing standards.

5. Roles and Responsibilities

- **Pharmacy Department:**
  - Monitor recall notifications from regulatory authorities and manufacturers.
  - Maintain updated medication inventory records.
  - Coordinate recall actions promptly.
- **Procurement:**
  - Inform suppliers and manufacturers about recall procedures.
  - Assist in returning recalled stock.
- **Clinical Staff:**
  - Report any adverse events or suspected medication quality issues.
  - Assist in identifying patients who may have received the recalled medication.

6. Recall Procedure

1. **Receipt of Recall Notice:**
   - Acknowledge and review the recall notice promptly.
2. **Verification:**
   - Identify affected medication batch numbers, expiry dates, and quantities in stock.
3. **Communication:**
   - Inform all relevant departments including pharmacy, nursing, and clinical teams.
   - Notify patients if necessary, especially in Class I recalls.
4. **Quarantine and Removal:**
   - Immediately quarantine all recalled medications to prevent dispensing.
   - Remove recalled stock from all storage and dispensing areas.
5. **Documentation:**
   - Record details of recalled medications, including batch numbers, quantities, and actions taken.
6. **Return or Disposal:**

    - Return the recalled stock to the manufacturer or dispose of it as per regulatory guidelines.

7. **Follow-up:**
    - Monitor for any adverse patient outcomes related to the recall.
    - Submit required reports to regulatory authorities.

7. Patient Safety Measures

- Review patient medication records to identify those who may have received recalled medications.
- Inform and advise patients on necessary actions (e.g., stopping medication, monitoring symptoms).
- Arrange alternative therapy as appropriate.

8. Training and Awareness

- Regular training for pharmacy and clinical staff on recall procedures.
- Maintain updated contact lists for regulatory agencies and suppliers.

9. Record Keeping and Audit

- Maintain comprehensive records of all recall actions for audit and regulatory purposes.
- Periodically review and update recall procedures.
